1. Read in performance statistics file, "pfm00000.txt". Find the line with the starting and ending dates. Print out the starting date, starting time, ending date, ending time, and the machine serial number.

2. Take the program you created for exercise # 1 and add code to it so that the program prints out the list of categories of data that are available in the pfm00000.txt file.

3. Write a program that reads in paragraph.txt and finds any lines that contain both of the words "Mary" and "Polly".
